DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: The phrase "This application is a continuation of prior U.S. Application Serial No. 09/430,708, filed October 29, 1999, now is US Patent No. 6,644,321 B1 issued November 11, 2003" should be inserted as the first sentence in the Specification to update the status of the parent Application. Appropriate correction is required.

Claim Objections

2. Claims 2-7 are objected to because of the following informalities: Claims 2 and 3 depend from claim 60, which is not present in the Application. Claim 4 depends from claim 61, which is not present in the Application. Claim 5 depends from claim 63, which is not present in the Application. Claims 6 and 7 depend from claim 62, which is not present in the Application. For the purpose of examination claims 60, 61, 62 and 63 have been treated as 1, 2, 3 and 4.

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3. Claims 1-7 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-7 of prior U.S. Patent No. 6,752,155 B2. This is a double patenting rejection.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Morgan et al. ('488); Silvian ('246); Bennett et al. ('413); Sivula et al. ('388) and Goedeke et al. ('246).
